

2001 Company TPO WindVented Roof System

The 2001 Company is now offering the highest quality of TPO membranes in 45, 60, and 72 mil sheets

Our thermoplastic polyolefin membrane offers system strength and reflectivity with dimensional stability while maximizing the benefits of heat-welded 10' wide sheets.

THICKER IS BETTER!!

Our 45 and 60 mil membrane consists of three layers:

- T.P.O. polymer base
- Strong polyester reinforced fabric center (scrim)
- T.P.O. compound top ply

Our top ply measures 15 mils over the top of the scrim while other heat-weld membranes can measure as low as 10 mils. Thicker is better.

With the 2001 Company patented WindVented technology; existing roofs can be left in place.

Advantages of the WindVented TPO Roof System

- **Lower installation cost.**
- **System's ability to dry out existing roofs and insulation. GUARANTEED!!!**
- **Warranties up to twenty years.**
- **White reflective membrane**
- **Environmentally friendly; contains no plastizers or chlorinated ingredients.**
- **Carries the EPA Energy Star label.**
