## Re-Skinning – Conventional – Introduction

Single ply membranes do not last forever. Carlisle, Firestone, Johns Manville, GAF, Stevens, etc. all wear out and we can re-skin most mechanically fastened and fully adhered systems very efficiently.

Our re-skinning technique has wind riders to match the existing installed system.

If the building owner wants a higher wind warranty, we can install a hurricane back wrap air seal option on top of the existing system and substantially increase the wind protection. The 2001 Co. reverse ballasted option also may increase wind resistance.

Re-skinning an existing roof with our 2001 Co. Wind Vented System can also dry out the area between a built up roof and the second single ply roof that is failing.
