

System 2001 Used on a 2nd Building at Bay Area Business Park

Building "D" is a 16,700 square foot building at Webster, Texas. After completing the re-roofing of Building "C" at this business park, Pyramid Waterproofing knew that **System 2001** was the perfect roof system for Building "D".

4' wide O.S.B. board and air seal rope were used to create an air sealed edge on this building.

Five roof top units and eight through wall scuppers are the only openings in this roof, making installation fast and easy.

Two plies of uncured flashing were used to flash the through wall scuppers. Three edges of this roof have a metal drip edge, allowing the water to spill over.
