

**System 2001** used on Building "C" (37,500 sf) of the Bay Area Business Park, Webster, Texas

**2001 Company · P.O. Box 2557 · Waterbury, CT 06702 · 1-800-537-7663**

Heavy conduit pipe made re-roofing difficult at the front side of the building. 2001 equalizer valves were placed farther in the roof area to adjust for the area supporting the conduits.

Air handling units and expansion joint were the only other obstacles to work around.
